

MUHAMMAD ANAS ALQOYYUM

Software Engineer

Jepara, Jawa Tengah, Indonesia

hello@anasalqoyyum.dev ♦ anasalqoyyum.dev ♦ linkedin.com/in/anasalqoyyum ♦ github.com/anasalqoyyum

WORK EXPERIENCE

AccelByte Inc.

Remote / Washington, USA

Software Engineer

Jun 2021 – Present

- Built and maintained developer-facing web, desktop, and backend systems across React, Electron, Node.js, and Golang, with a focus on reliable APIs, operational tooling, and developer workflows.
- Led the architecture of a code-generated TypeScript Web SDK from OpenAPI into a strongly typed, modular client, eliminating most hand-written wrappers and accelerating adoption for both internal teams and customers.
- Designed and maintained semantic versioning, release automation, and backwards-compatible upgrade paths for the TypeScript Web SDK, giving integrators predictable releases and clear migration notes.
- Led the migration from an enterprise release-planning and orchestration platform into focused internal tools, including a frontend Release Manager UI and TUI workflows for release automation, reducing software cost and operational complexity.
- Led the design and rollout of an AI chat assistant inside an Electron desktop application for game developers, using the Vercel AI SDK for streaming responses and tool-calling to help users inspect builds, logs, and operational data more efficiently.
- Designed pragmatic guardrails for in-product AI usage, including bounded token limits and contextual prompting that pulled in-app data into conversations, leading to strong adoption among active users with few production issues observed through analytics and Sentry.
- Expanded the assistant with deeper workflow capabilities such as MCP support, BYOK, and FPS-drop analysis from game build logs, turning it into a more capable diagnostic and developer support tool.
- Established a standardized load-testing process for the frontend framework (Remix.js + Node.js), achieving a 7x performance improvement while reducing VM load.

Saraf Design

Semarang, Indonesia

Software Engineer Fullstack / Founding Engineer

Jan 2019 – Dec 2021

- Conceptualized, developed, shipped, and maintained over 30 client projects across small business websites, internal systems, and custom web applications.
- Collaborated directly with clients to clarify goals, reduce scope into deliverable milestones, and iterate based on feedback after release.
- Developed full-stack web applications using Laravel and Vue.js, with responsibility across frontend UI, backend workflows, database integration, and deployment handoff.

Undip Career Center (UCC)

Semarang, Indonesia

Software Engineer Fullstack (Contract)

Apr 2021 – Jun 2021

- Developed and delivered a job seeker center website using Laravel and Vue.js, translating stakeholder requirements into a usable production application on a short contract timeline.

EDUCATION

Diponegoro University

Semarang, Indonesia

Bachelor of Science in Computer Science

Jun 2017 – May 2021

- **Honors:** 3.62 / 4.0 GPA, Cumlaude
- **Courses:** Algorithms & Data Structures, Machine Learning, Languages and Automata Theory, Computing and Graphics
- **Thesis:** YOLOv4 Algorithm Implementation Based on Darknet and Optical Character Recognition on Vehicle License Plate Detection
- **Activities:** Student Board - Appointed as Head of Communication and Information

LEADERSHIP AND ACTIVITIES

Informatics Student Board (HMIF)

Semarang, Indonesia

Head of Communication and Information

Jan 2018 – Jan 2020

- Led a team of peers in managing communication strategies and information flow for the University Student Board.
- Illustrated, created and conceptualized the design of post content. Mainly Instagram and Line account of HMIF undip
- Managed and developed HMIF Undip website.

PROJECTS

Lazy Bitbucket Dashboard

OSS

- Terminal user interface for browsing Bitbucket pull requests, built with Bubble Tea and the Charm framework with a focus on fast keyboard-driven review workflows.

msr-archiver

OSS

- Bun-based TUI and Golang CLI for archiving Arknights OSTs from monster-siren.hypergryph.com with album/song metadata, cover art, lyrics, and ffmpeg-powered WAV-to-FLAC conversion.

ai-drew-toolbar

OSS

- Browser extension that lets developers inspect a live web app, select a UI element, and copy the relevant code context such as file paths, component names, and HTML structure for use with AI coding tools like Cursor, Claude Code, and GitHub Copilot.

Dead Simple Markdown Notes

OSS

- A simple markdown note taking app with a focus on speed and simplicity.

konasute-autoscener

OSS

- OBS Auto Scene Switcher for Konami's Sound Voltex (Arcade & Konasute) using WebSocket to explore OBS WebSocket Plugin.

Ansible as a (reproducible) workstation environment

OSS

- Ansible playbook collection to setup new workstation (Mac & Linux) with all the necessary tools and configurations that I needed.

Hikari

OSS

- Yet another player profile customization frontend for video games with AIR movement.
- Written with a detailed and easy-to-use dockerized environment on how to deploy on a home arcade environment.
- Fullstack written with Next.js and using MariaDB. Docker and Nginx is used during deployment.

HONORS AND AWARDS

Funded Project in Student Creativity Week (PKM)

Jakarta, Indonesia

Issued by *Ministry of Education and Culture*

Sep 2020

- Served as the speaker and presented in the event.

Silver Award Indonesia Inventors Day

Jakarta, Indonesia

Issued by *Indonesian Invention and Innovation Promotion Association (INNOPA)*

Aug 2019

RESEARCH AND PUBLICATIONS

YOLOv4 Algorithm Implementation Based on Darknet and Optical Character Recognition on Vehicle License Plate Detection

Published on *AIP Conference Proceedings in The 6th International Conference On Energy, Environment, Epidemiology And Information System (ICENIS)*

May 2023

SKILLS, LANGUAGES, INTERESTS

- **Languages:** Bahasa Indonesia (Native Speaker), English (Business proficiency)
- **Core:** TypeScript & JavaScript, Frontend Product Engineering, Golang, Python, SQL & PostgreSQL, HTML & CSS
- **Backend & APIs:** Node.js & Bun, Express.js, REST APIs, OpenAPI & Code Generation, PostgreSQL, Service Integration, Performance Testing, CI/CD
- **CLI & Developer Experience:** CLI Tooling, Terminal UX, Cross-platform Tooling, Release Automation, Package Distribution, Developer Tooling
- **Product Engineering:** Customer-Focused Product Development, MVP Scoping & Iteration, React, Electron, Next.js & Remix.js, Tailwind CSS, CI/CD
- **AI & Developer Tooling:** Vercel AI SDK, Model Context Protocol (MCP), Tool Calling, Context Engineering, Developer Tooling
- **Data & ML:** Machine Learning, Computer Vision, Jupyter Notebook, Numpy, Pandas
- **Tools:** Git, Docker, Neovim, Visual Studio Code, Figma, Typst

- **Additional:** Angular & RxJS, Docusaurus, Vue, Svelte & Sveltekit, Three.js, Laravel
- **Collaboration:** Technical Writing, Cross-functional Collaboration, Product Thinking, Public Speaking, Leadership
- **Interests:** Developer Tools, AI-Assisted Product Experiences, Game Technology, Terminal Interfaces, Arcade Games, Reading Non-fiction
