WORK EXPERIENCE

AccelByte Inc.

Software Engineer

Remote / Washington, USA

Jun 2021 – Present

- Built and led delivery of core products across web and desktop applications (React & Electron) as well as backend services (Node.js and Golang).
- Led the architecture of a code-generated TypeScript Web SDK from OpenAPI into a strongly typed, modular client, eliminating most hand-written wrappers and accelerating adoption for both internal teams and customers.
- Led the design and rollout of an AI chat assistant inside an Electron desktop application for game developers, using the Vercel AI SDK for streaming responses and tool-calling to help users inspect builds, logs, and operational data more efficiently.
- Designed pragmatic guardrails for in-product AI usage, including bounded token limits and contextual prompting that pulled in-app data into conversations, leading to strong adoption among active users with few production issues observed through analytics and Sentry.
- Expanded the assistant with deeper workflow capabilities such as MCP support, BYOK, and FPS-drop analysis from game build logs, turning it into a more capable diagnostic and developer support tool.
- Automated customer-specific solution customization through an in-house visual app editor, replacing repetitive engineering work with a faster and more scalable workflow.
- Established a standardized load-testing process for the frontend framework (Remix.js + Node.js), achieving a 7x performance improvement while reducing VM load.

Saraf Design

Software Engineer Fullstack / Founding Engineer

Semarang, Indonesia

Jan 2019 – Dec 2021

- Successfully conceptualized, developed, and fixed over 30 projects, both large-scale and small-scale, catering to diverse client requirements.
- Collaborated closely with clients to outline project goals and scope.
- Developed web application using Laravel and Vue.js.

Undip Career Center (UCC)

Software Engineer Fullstack (Contract)

Semarang, Indonesia

Apr 2021 – Jun 2021

- Developed and delivered job seeker center website using Laravel and Vue.js.

EDUCATION

Diponegoro University

Bachelor of Science in Computer Science

Semarang, Indonesia

Jun 2017 – May 2021

- **Honors:** 3.62 / 4.0 GPA, Cumlaude
- **Courses:** Algorithms & Data Structures, Machine Learning, Languages and Automata Theory, Computing and Graphics
- **Thesis:** YOLOv4 Algorithm Implementation Based on Darknet and Optical Character Recognition on Vehicle License Plate Detection
- **Activities:** Student Board - Appointed as Head of Communication and Information

LEADERSHIP AND ACTIVITIES

Informatics Student Board (HMIF)

Head of Communication and Information

Semarang, Indonesia

Jan 2018 – Jan 2020

- Led a team of peers in managing communication strategies and information flow for the University Student Board.
- Illustrated, created and conceptualized the design of post content. Mainly Instagram and Line account of HMIF undip
- Managed and developed HMIF Undip website.

PROJECTS

ai-drew-toolbar

OSS

- Browser extension that lets developers inspect a live web app, select a UI element, and copy the relevant code context such as file paths, component names, and HTML structure for use with AI coding tools like Cursor, Claude Code, and GitHub Copilot.

msr-archiver

OSS

- Bun-based TUI and Golang CLI for archiving Arknights OSTs from monster-siren.hypergryph.com with album/song metadata, cover art, lyrics, and ffmpeg-powered WAV-to-FLAC conversion.

Lazy Bitbucket Dashboard

OSS

- A terminal user interface (TUI) apps for browsing Bitbucket pull requests built with Bubble Tea and the Charm framework.

Dead Simple Markdown Notes

OSS

- A simple markdown note taking app with a focus on speed and simplicity.

konasute-autoscener

OSS

- OBS Auto Scene Switcher for Konami's Sound Voltex (Arcade & Konasute) using WebSocket to explore OBS WebSocket Plugin.

Ansible as a (reproducible) workstation environment

OSS

- Ansible playbook collection to setup new workstation (Mac & Linux) with all the necessary tools and configurations that I needed.

Hikari

OSS

- Yet another player profile customizatn frontend for video games with AIR movement.
- Written with a detailed and easy-to-use dockerized environment on how to deploy on a home arcade environment.
- Fullstack written with Next.js and using MariaDB. Docker and Nginx is used during deployment.

HONORS AND AWARDS

Funded Project in Student Creativity Week (PKM)

Jakarta, Indonesia

Issued by *Ministry of Education and Culture*

Sep 2020

- Served as the speaker and presented in the event.

Silver Award Indonesia Inventors Day

Jakarta, Indonesia

Issued by *Indonesian Invention and Innovation Promotion Association (INNOPA)*

Aug 2019

RESEARCH AND PUBLICATIONS

YOLOv4 Algorithm Implementation Based on Darknet and Optical Character Recognition on Vehicle License Plate Detection

Published on *AIP Conference Proceedings in The 6th International Conference On Energy, Environment, Epidemiology And Information System (ICENIS)*

May 2023

SKILLS, LANGUAGES, INTERESTS

- **Languages:** Bahasa Indonesia (Native Speaker), English (Business proficiency)
- **Core:** TypeScript & JavaScript, Golang, Python, SQL & PostgreSQL, HTML & CSS
- **Product Engineering:** React, Electron, Node.js & Bun, Next.js & Remix.js, REST APIs, OpenAPI & Code Generation, CI/CD
- **AI & Developer Tooling:** Vercel AI SDK, Model Context Protocol (MCP), Tool Calling, Context Engineering, Developer Tooling
- **Data & ML:** Machine Learning, Computer Vision, Jupyter Notebook, Numpy, Pandas
- **Tools:** Git, Docker, Neovim, Visual Studio Code, Figma, Typst
- **Additional:** Docusaurus, Vue, Svelte & Sveltekit, Three.js, Tailwind CSS, Laravel
- **Collaboration:** Technical Writing, Cross-functional Collaboration, Product Thinking, Public Speaking, Leadership
- **Interests:** Developer Tools, AI-Assisted Product Experiences, Game Technology, Terminal Interfaces, Arcade Games, Reading Non-fiction
